Çatalhöyük:

The Bioarchaeology of an Early Farming Society in Transition

The bioarchaeological record of human remains viewed in the context of ecology, subsistence, and living circumstances provides a fundamental resource for interpreting the impact of plant and animal domestication in the late Pleistocene and early/middle Holocene. For Western Asia, Çatalhöyük (7400-600 cal BC) in central Anatolia, presents a comprehensive, contextualized setting for interpreting living conditions in this highly dynamic period of human history.

Employing demography, biogeochemistry, biomechanics, growth and development, and palaeopathology, this talk focuses on addressing the question:

What were the implications of farming and agricultural intensification, increasing sedentism, and population growth for health and lifestyle in this early farming community?

ANTHROPOLOGY COLLOQUIUM

FRIDAY
MARCH
24TH, 2023

11:00 AM - 1 PM

ZOOM
PRESENTATION
