FISH 498 SENIOR THESIS PROPOSAL
FALL, SPRING, AND SUMMER SEMESTER 2015-2016

Instructor/Office Hours
Faculty/TBA

Meeting Location and Time
N/A

Course Credits
2 credits (for letter grade)

Contact Hours
Time spent with the faculty mentor in individual instruction will vary depending on the student’s progress on the thesis proposal; however, at least 80 hours of supervised scholarly activity most occur during the semester to complete a senior thesis proposal.

Course Prerequisites
Fisheries major with senior standing and a GPA of 3.2 or higher. Permission of a Fisheries Division faculty mentor and the SFOS Internship Coordinator (the coordinator may also be a mentor). STAT 200, ENGL 414. Recommended Courses: FISH 315, STAT 401 or STAT 402.

Course Description
Under the supervision and mentorship of a Fisheries Division faculty member, students will complete the first part of a year-long, self-designed scholarly project that is the capstone of a student’s exemplary academic performance in the Bachelor of Science in Fisheries Science or Bachelor of Arts in Fisheries degree programs. For this component of senior thesis (FISH 498 Senior Thesis Proposal), the student will develop a proposal that will reflect a thorough understanding of the relevant and existing literature, study objectives and testable hypotheses, the methodology by which data will be collected through field and/or laboratory research, including data analyses, and a timeline by which the senior thesis will be completed. In addition, the student should also complete the collection of field and/or laboratory data and begin data analysis. A senior thesis project should be an original work that ideally makes a contribution to the fisheries discipline.

Although not as broad in scope as a graduate research project, undergraduate research can serve as a launching pad to graduate school or a career in fisheries. Senior theses may stem from summer research experience as a student intern or take place entirely on campus in a fisheries laboratory. Following the successful completion of this course, students will be allowed to enroll in FISH 499 Senior Thesis Project. Participation in this program will count towards the Experiential Learning requirement for either the B.S. or B.A. Fisheries degree programs.

Course Goal and Student Learning Objectives
Hands-on research provides undergraduate students with an opportunity to enrich their educational experience, accelerate their development as young professionals, and hone skills that are needed to complete graduate- and career-level research. To become familiar with the process of scientific inquiry, including research goal definition, the scientific method, technical write-up, oral presentation of results, and publication of a manuscript, a senior thesis is an irreplaceable experience. The first part of the senior thesis experience, which will be completed in this course
(FISH 498), will focus on developing a research idea, composing a proposal by which that research idea will be explored through the scientific method, collecting field and/or laboratory data, and initiating analysis of the collected data.

The entire senior thesis process will improve the ability of students to find employment and additional educational opportunity after their Fisheries B.S. or B.A. degrees have been completed. Employers and prospective graduate schools value research experience because it demonstrates the ability of a student to successfully complete a large-scale project that requires analytical, critical thinking, and oral and written communication skills. Undergraduate students frequently develop close and long-term professional relationships with their research mentors, and the example that mentors provide can be a lasting inspiration for students to become life-long learners in their field of choice. Specific student learning objectives associated with this course include the following:

a. Become familiar with the process of scientific inquiry through research idea identification;

b. Understand how to develop and complete a scientific research project through the proposal writing and data collection/analysis process;

c. Learn how to search for and locate scientific literature and develop a comprehensive understanding of a specific research topic;

d. Sharpen critical thinking, written communication, data collection, and analysis skills.

Support/ Disabilities Services
If students need accommodation because of a disability, please contact the faculty mentor and SFOS internship coordinator as soon as possible to make the necessary arrangements with the Office of Disabilities Services (203 WHIT, 474-7043).

Instructional Methods
Students will learn from individual instruction from their faculty senior thesis mentor. In general, this course will require a significant degree of self-directed study.

Reading Assignments
There is no required text for this course; however, students will be required to conduct an extensive literature survey to develop their senior thesis proposal.

Course Calendar
The senior thesis experience is completed over two semesters. The first course in the sequence (this course), FISH 498 Senior Thesis Proposal, must be completed successfully before students will be allowed to enroll for the second course in the sequence, FISH 499 Senior Thesis Project. The scheduling and timeline should be agreed upon between the student and faculty mentor within the first month of the semester the student is enrolled in FISH 498. Below is an example of a general timeline that can be used as a template for a more detailed, specific timeline to be revised by the student and his/her senior thesis mentor for FISH 498.
Month 1: Identification of a research topic, submission of a research pre-proposal, selection of Fisheries Division faculty mentor, creation of project timeline, and initiation of the project literature review;

Month 2: Completion of the literature review and submission of a complete research proposal;

Month 3: Collection of field and/or laboratory data;

Month 4: Compilation of data, data analysis, and submission of a progress report to the faculty mentor.

Course Assignments

1. **Timeline:** The senior thesis timeline should provide major landmarks and deadlines for the entire duration of the senior thesis (both FISH 498 and FISH 499). This document will require contribution and confirmation from both the student and the faculty mentor.

2. **Pre-proposal:** The pre-proposal is a 1- to 2-page outline of the senior thesis that must be submitted to the faculty mentor and SFOS internship coordinator prior to enrolling for FISH 498. The pre-proposal should contain the project study goals and objectives, general methods to be used to address the study objectives, and expected outcomes.

3. **Proposal:** The proposal is a 10- to 15-page proposal of the research project to be conducted, including background information and justification, specific objectives and testable hypotheses, proposed methods, and data analysis approaches. The thesis timeline should also be included as part of this document.

4. **Progress Reports:** The progress report(s) should be submitted to the faculty mentor on a regular basis (to be determined at the time of timeline creation). The progress reports will detail progress in toward completing the literature review, proposal development, data collection and analysis, and manuscript development.

Grading

*For senior thesis, failure to turn in any of the required assignments is grounds for a failing grade.* Because the senior thesis is based on the individual experience, a grading curve does not apply. Assignments are as follows (details for each assignment are listed above): timeline, pre-proposal, proposal, and data collection and analysis.

**Letter Grade Breakdown:** (1) Faculty Evaluation of Timeline Completion 10%; (2) Pre-Proposal 10%; (3) Progress Reports 20%; (4) Proposal 30%; and (5) Data Collection and Analysis 30%. All letter grades will be based on an absolute 90-80-70-60 scale (e.g., ≥ 90% = A, and so on).

Course Policies

1. **Late Assignments:** All assignments are due to the faculty mentor by the dates indicated on the senior thesis timeline. If a student cannot turn in an assignment on time for a legitimate reason, it is the responsibility of the student to contact the faculty mentor (not the SFOS internship coordinator) prior to the date in question to not to receive a penalty.
2. Academic Honesty: All assignments are to be entirely the student’s own work, unless the student receives specific instructions to the contrary. All aspects of this course are covered by the UAF Honor system. Any suspected violations will be promptly reported and appropriate action(s) will be taken. Honesty in your academic work will develop into professional integrity. The faculty, staff, and students of the UAF will not tolerate any form of academic dishonesty.
