B.A., B.S. Degrees

Minimum Requirements for Degrees: 120 credits

Geography provides an organized view of the earth as a whole and of its regions and human activities. Geography serves as a bridge between the natural and social sciences by studying the interrelationships between the earth's physical and biological systems, and how these environmental systems provide a natural resource base for human societies. Geographers are interested in patterns of human settlement, natural resources distribution, resources use and conservation. Geographers are interested in the sense of place among the peoples of the world.

Geographic methodologies include observation, measurement, description and analysis of places or areas including their likenesses, differences, interdependence and importance.

Geographic professions are diverse and include opportunities in mapping, remote sensing, demographics, international relations, landscape analysis, environmental assessment and planning, regional planning, and weather and climate analysis. Also, geography provides an excellent background for specialized or interdisciplinary graduate study.

The geography B.A. degree program provides a broad cultural background in the liberal arts, a geographic perspective based on world regions, preparation for teaching geography, earth science or social science in elementary or secondary schools, and technical training for professional geographic work in government, business or industry.

The geography B.S. degree is subtitled "environmental studies." The program provides the foundation necessary for understanding the natural and social environment, the analysis of environmental issues from an interdisciplinary geographic perspective, a diverse technical and scientific approach to environmental issues, and the ability to find balanced solutions to environmental problems.

Students may elect advanced work in geography or other disciplines to provide a concentration in either physical or social science. A minor in geography is also available.
