The Technology Advisory Board met on November 6, 2010 for the award of the Fall 2010 TAB grants. This semester there were 34 proposals totaling $250,686 in funds being requested.

TAB awarded approximately $105,500 (total amount available) in 17 grants to a number of projects, including some additional technology based checkout equipment for the library that will be available to faculty, staff, and students, new camera bodies for photojournalism and photography students, movement motors for a student arctic robotic research assignment be tested in Greenland, and support funding for a number of other interesting projects around campus.

Due to reduced TAB funds available this semester the committee tried to provide at least partial funding across as many proposals as possible. In some cases this was not possible due to most of the proposal being a single high priced item or lack of itemized information in the proposal submission.
