1. Assessment information collected- We are continuing to assess our graduates with National exam results in Radiography and Infection Control, the mock/exit exam scores, and competencies are also collected in the following courses: F251, F252, F254, and F152. We collected surveys from employers of the graduates as well as the graduates themselves.

2. Conclusions drawn from the information summarized above - We need to continue stressing the importance of the national cert. in Radiography and Infection Control. What I am finding now though, the students are wanting to wait until they have completed the 600 hour, on the job requirement, that is needed to take the entire DANB national exam all at once, instead of taking it in 3 separate sections... IE: Radiography and Infection Control. And then General Chairside. There is still the ongoing battle with the students feeling the certification isn't important if they are employed. Students do very well on the exit exam as well as the competencies, passing at a 90% or higher. Employers are satisfied with the DA AAS graduates skill level as well as the professionalism they present with.

3. Curricular changes resulting from conclusions drawn above- No official curricular changes are needed but I will be requiring more actual chair side repetitions, ( practice ) to enhance the students preparedness to jump in to the assisting chair upon employment. Hoping to lessen the training time needed.
4. Identify the faculty members involved in reaching the conclusions drawn above and agreeing upon the curricular changes resulting. We didn’t have any changes in our faculty members this year. Jennifer Graves (adjunct faculty), Shannon Vargas (adjunct faculty), Dr. Ryle Radke, DDS (adjunct faculty), Jennifer Filotei (program head).
