Bring Snow Inside

Collecting and exploring snow inside makes a fun sensory activity.

Materials Needed:
Tray or bowl, snow (or crushed ice), towel.

Some of the following items:
Children’s silverware, cookie cutters, small plastic toys, watercolors or food coloring, paintbrushes.

Instructions:

Step 1: Collect snow in a tray or bowl and bring indoors. Set down on a surface that can get wet. A towel will help dry hands or mop up spills. The snow will last 20-30 minutes before it melts.

Step 2: Explore the snow with your child(ren). Play with your toys in the snow. If it feels too cold, use children’s silverware to touch it. If the snow is clean, you can taste it! As it warms, you can shape it into snowmen and snow caves, or shape it with cookie cutters. Paint it with watercolors or food coloring. Feel the snow as it slowly melts and becomes liquid water!
