

Tuesday Tips is a new outreach effort by OGCA. The idea behind *Tuesday Tips* is to convey tips, tricks and other helpful information around the area of research administration. Our goal is to post on (almost every) Tuesdays. If there is something you would like to see covered on *Tuesday Tips*, email: UAF-GCReATE@alaska.edu. For more Tips visit [OGCA website](#).

Reviewer Guidance on Rigor and Transparency: Research Project Grant and Mentored Career Development Applications

The goal of this initiative is to enhance reproducibility of research through rigor and transparency. Several years ago, NIH updated application instructions and review language for research grant (NOT-OD-16-011) and mentored career development award (NOT-OD-16-012) applications. Recently, NIH further clarified the language to replace the term “scientific premise” with the term “rigor of the prior research” for applications submitted for due dates of January 25, 2019 and beyond (NOT-OD-18-228 and NOT-OD-18-229). In addition, applicants will describe plans to address any weaknesses in the rigor of prior research within the Research Strategy and reviewers will assess this plan. Implementation of rigor and

transparency for individual fellowship, institutional career development, and institutional training grant applications will be announced in advance, on a different timeline that allows for training in rigor and transparency to be developed (NOT-OD-16-034).

The four areas of the current rigor and transparency initiative:

- The Rigor of the Prior Research
- Scientific Rigor
- Consideration of Sex and Other Biological Variables
- Authentication of Key Biological and/or Chemical Resources

You may submit your comments/questions about the NIH policy to reproducibility@nih.gov

Additional information on [Rigor and Transparency](#) can be found on the NIH website.

Reviewer Guidance on Rigor and Transparency: Research Project Grant and Mentored Career Development Applications

The goal of this initiative is to enhance reproducibility of research through rigor and transparency. Several years ago, NIH updated application instructions and review language for research grant ([NOT-OD-16-011](#)) and mentored career development award ([NOT-OD-16-012](#)) applications. Recently, NIH further clarified the language to replace the term “scientific premise” with the term “rigor of the prior research” for applications submitted for due dates of January 25, 2019 and beyond ([NOT-OD-18-228](#) and [NOT-OD-18-229](#)). In addition, applicants will describe plans to address any weaknesses in the rigor of prior research within the Research Strategy and reviewers will assess this plan. Implementation of rigor and transparency for individual fellowship, institutional career development, and institutional training grant applications will be announced in advance, on a different timeline that allows for training in rigor and transparency to be developed ([NOT-OD-16-034](#)).

The four areas of the current rigor and transparency initiative are explained below.

- **The rigor of the prior research** concerns the quality and strength of the research being cited by the applicant as crucial to support the application; this is distinct from the hypothesis or justification.
 - The applicant should discuss the strengths and weaknesses of the prior research used to support the application and describe how the proposed research will address weaknesses or gaps identified by the applicant. This may include the applicant’s own preliminary data, data published by the applicant, or data published by others. The NIH expects this consideration to include attention to the rigor of the previous experimental designs, as well as relevant biological variables and authentication of key resources.
 - Reviewers will evaluate the rigor of the prior research as part of the Significance and Approach criteria for research grant applications or the Research Plan criterion for mentored career development award applications.
 - Consider whether the prior research that serves as the key support for the proposed project is rigorous.
 - Consider whether the investigators included plans to address weaknesses or gaps identified in the rigor of prior research.

- Weaknesses or gaps in the rigor of the prior research that serves as the key support for the proposed project, or the failure to address those weakness or gaps, may affect criterion and overall impact scores.
- **Scientific Rigor** is the strict application of the scientific method to ensure robust and unbiased experimental design, methodology, analysis, interpretation and reporting of results. Whereas rigor of the prior research pertains to key supporting data, scientific rigor pertains to the proposed research.
 - The applicant should describe experimental controls, plans to reduce bias (blinding, randomization, inclusion and exclusion criteria, etc.), power analyses, and statistical methods, as appropriate.
 - Reviewers will assess scientific rigor as part of the Approach criterion for research grant applications and the Research Plan criterion for mentored career development award applications, as well as the overall impact score.
 - The Vertebrate Animal Section no longer requires a justification of animal numbers ([NOT-OD-16-006](#)). Inadequate vertebrate animal numbers should be reflected in the score and will not result in a block to funding.
 - Reviewers will assess information concerning numbers of animals according to the section where it is included in the application.

	Rigor of the prior data	Scientific Rigor
Pertains to:	Key supporting data	Proposed research
Review Criterion – Research Grants	Significance and Approach	Approach
Review Criterion – Mentored Career Development Grants	Research Plan	Research Plan

- **Consideration of Sex and Other Biological Variables** includes the critical factors affecting health or disease in vertebrate animals or human subjects. Biological variables, such as sex, age, weight, and underlying health conditions, are often critical factors affecting health or disease.
 - Applicants are expected to factor Sex as a Biological Variable (SABV) into research designs, analyses, and reporting in vertebrate animal and human studies.
 - Consideration of SABV does not necessarily mean sex differences research. See Figure 1 in “Studying both sexes: A guiding principle for biomedicine” for further detail.
 - A justification is expected if the application proposes to study one sex, for example in the case of a sex-specific condition or phenomenon (e.g., ovarian or prostate cancer), acutely scarce resources, or sex-specific hypotheses when there are known differences between males and females.
 - Cost and absence of known sex differences are inadequate justifications for not studying both sexes.

- Reviewers will assess the applicant's plans to address relevant biological variables, such as sex, as part of the Approach (or Research Plan) criterion score and the overall impact score, and comment on the adequacy of those plans in their written critiques and in meeting discussions.
 - Reviewers will assess information according to the section where it is included in the application.
 - See additional reviewer guidance for evaluating sex as a biological variable: [https://grants.nih.gov/grants/peer/guidelines_general/SABV Decision Tree for Reviewers.pdf](https://grants.nih.gov/grants/peer/guidelines_general/SABV_Decision_Tree_for_Reviewers.pdf).
- **Authentication of Key Biological and/or Chemical Resources.** Key biological and/or chemical resources are those that 1) may differ from laboratory to laboratory or over time; 2) may have qualities and/or qualifications that could influence the research data; and 3) are integral to the proposed research. These include, but are not limited to, cell lines, specialty chemicals, antibodies, and other biologics, not standard laboratory reagents. Please see [NOT-OD-17-068](#) for more details.
 - Applicants should provide a brief plan (one page or less).
 - The plan should not include authentication data or any other data.
 - The plan may reflect existing guidelines or standards for authentication of a resource when such standards exist.
 - Reviewers will discuss the authentication plan after scoring; comments on key resource authentication should not affect scores.
 - Reviewers will comment in their written critiques and discussion at the meeting on the adequacy of the plan for key resource authentication; comments can be addressed by the applicant prior to award for meritorious applications.
 - Reviewers should note if the authentication plan is missing from the application.

Not all activity codes are included in the rigor and transparency initiative. Therefore, reviewers need to follow the correct review criteria and use the appropriate and current critique template for each application. Your Scientific Review Officer (SRO) should provide or direct you to the appropriate templates and guidance.

Page limits have not changed. SROs and reviewers need to be alert for over-stuffed applications.

You may submit your comments/questions about the NIH policy to reproducibility@nih.gov.

OVERVIEW: RESEARCH PROJECT GRANT (RPG) APPLICATIONS

Element of Rigor and Transparency	Section of Application	Criterion Score	Additional Review Consideration	Contribute to Overall Impact Score?

Rigor of the Prior Research	Research Strategy	Significance and Approach	NA	Yes
Scientific Rigor	Research Strategy	Approach	NA	Yes
Consideration of Relevant Biological Variables, such as Sex	Research Strategy	Approach	NA	Yes
Authentication of Key Biological and/or Chemical Resources	New Attachment	NA	Yes	No

OVERVIEW: MENTORED CAREER DEVELOPMENT AWARD (K) APPLICATIONS

Element of Rigor and Transparency	Section of Application	Criterion Score	Additional Review Consideration	Contribute to Overall Impact Score?
Rigor of the Prior Research	Research Strategy	Research Plan	NA	Yes
Scientific Rigor	Research Strategy	Research Plan	NA	Yes
Consideration of Relevant Biological Variables, such as Sex	Research Strategy	Research Plan	NA	Yes
Authentication of Key Biological and/or Chemical Resources	New Attachment	NA	Yes	No
