ATTACH COMPLETE SYLLABUS (as part of this application). This list is online at:

http://www.uaf.edu/uafgov/faculty-senate/curriculum/course-degree-procedures-/uaf-syllabus-requirements/

The Faculty Senate curriculum committees will review the syllabus to ensure that each of the items listed below are included. If items are missing or unclear, the proposed course (or changes to it) may be denied.

SYLLABUS CHECKLIST FOR ALL UAF COURSES

During the first week of class, instructors will distribute a course syllabus. Although modifications may be made throughout the semester, this document will contain the following information (as applicable to the discipline):

1. Course information:

Latitle, I number, I credits, I prerequisites, I location, I meeting time (make sure that contact hours are in line with credits).

2. Instructor (and if applicable, Teaching Assistant) information:

By Name, by office location, by office hours, by telephone, by email address.

3. Course readings/materials:

□ Course textbook title, □ author, □ edition/publisher.
□ Supplementary readings (indicate whether □ required or □ recommended) and any supplies required.

4. Course description:

- Content of the course and how it fits into the broader curriculum;
- Expected proficiencies required to undertake the course, if applicable.
- Inclusion of catalog description is *strongly* recommended, and
- Description in syllabus must be consistent with catalog course description.

5. □ Course Goals (general), and (see #6)

6. Student Learning Outcomes (more specific)

7. Instructional methods:

Describe the teaching techniques (eg: lecture, case study, small group discussion, private instruction, studio instruction, values clarification, games, journal writing, use of Blackboard, audio/video conferencing, etc.).

8. Course calendar:

A schedule of class topics and assignments must be included. Be specific so that it is clear that the instructor has thought this through and will not be making it up on the fly (e.g. it is not adequate to say "lab". Instead, give each lab a title that describes its content). You may call the outline Tentative or Work in Progress to allow for modifications during the semester.

9. Course policies:

Expecify course rules, including your policies on attendance, tardiness, class participation, make-up exams, and plagiarism/academic integrity.

10. Evaluation:

Bpecify how students will be evaluated, what factors will be included, their relative value, and how they will be tabulated into grades (on a curve, absolute scores, etc.) Publicize UAF regulations with regard to the grades of "C" and below as applicable to this course. (Not required in the syllabus, but is a convenient way to publicize this.) Link to PDF summary of grading policy for "C":

http://www.uaf.edu/files/uafgov/Info-to-Publicize-C Grading-Policy-UPDATED-May-2013.pdf

11. Support Services:

Describe the student support services such as tutoring (local and/or regional) appropriate for the course.

12. Disabilities Services: Note that the phone# and location have been **updated**. http://www.uaf.edu/disability/ The Office of Disability Services implements the Americans with Disabilities Act (ADA), and ensures that UAF students have equal access to the campus and course materials.

State that you will work with the Office of Disabilities Services (208 WHITAKER BLDG, 474-5655) to provide reasonable accommodation to students with disabilities.

5/21/2013

- CURRENT TOPICS IN PHYSICS -

PHYSICS 472Z - Syllabus

Spring 2016

Instructor: Channon Price, x6106, cpprice@alaska.edu

Office hours: Days, time(s) TBD

Class hours: MWF 1-2pm; REIC TBD

Prerequisites: PHYS 220; PHYS 301.

Texts: To be determined.

Description: The advanced topics modules provide expanded exposure to modern subjects in physics.

Three topics are offered each semester, providing breadth beyond the core subjects of the Physics undergraduate curriculum. This course will present the most current material from one particular topic in Physics, to be determined at the time of the offering. Students are expected to have familiarity with the core subjects in the field (classical mechanics, electromagnetism, statistical physics, quantum mechanics.) (Prerequisites: PHYS 220; PHYS 301.) (1+0)

Grading: 1 credit. Homework (30%); class project (30%); final exam (30%); class participation (10%).

The course will be graded on absolute scores (90-100: A, 80-89: B, 70-79: C, 60-69, D; below

60, F) and will not be graded plus/minus.

Schedule: See the attached course schedule.

Instructional Lecture based course.

Methods:

Course It is against the UAF Honor Code to misrepresent work which is not your own; plagiarism on

Policies: any graded material will result in a failing grade. The instructor will check submitted work

against available documents.

Learning Students who complete this module will become familiar with present status and ongoing

Outcomes: research directions in this sub-field of Physics. They will become acquainted with current

paradigms, and by working with toy models, they will develop an understanding of the successes in the sub-field, of current research goals, and of expectations for future progress.

Support Students may consult with the instructor during office hours for help with the course.

Services: Typically, there are no tutors available on campus who can assist with 400-level Physics

courses.

Disability The Physics Department will work with the Office of Disabilities Services (208 WHIT, x5655)

Services: to provide reasonable accommodation to students with disabilities.

Tentative PHYS 472Z Course Schedule

Lecture 1: Introduction

Foundational material: placement into the larger context of the field of Physics; historical results; impetus for recent developments and breakthroughs

Lectures 2 and 3: Primer

Beginning at a level accessible to a fourth-year student, a 'sandbox' is developed using paradigms and toy models which will be the vehicles for the remainder of the course.

Lectures 4, 5, 7, and 8: Current Status

Working within the 'sandbox' of the paradigms and toy models developed in the previous lectures, the recent developments and breakthroughs of the sub-field are presented. (Ordering and selection of material for this and the following lecture will take into consideration the need for students to choose a class project by the end of the second week of the course.)

Lecture 6: Discussion and Selection of Class Projects

Suggestions for viable project topics; discussions of student ideas for projects; expectations for level and degree of project complexity

Lecture 9: Impacts on the Field

New developments in Physics cause repercussions both directly in the sub-field and more broadly throughout the field. How have the advances and breakthroughs in this area affected our physical thinking?

Lectures 10 and 11: Future Directions and Potential Results

What are current research goals in this topic? Based on present status and ongoing research programs, what might be expected in the future in the near- and middle-term?

Lectures 12 and 13: Class Projects

Student presentation of projects and seminar-style discussion.

Lecture 14: Final exam
